

KRUNAL JETHVA

Software Engineer · .NET · Angular · Cloud

+91 99242-53527 | krunaljethva90@gmail.com | krunal-ctrl.github.io | Pune, Maharashtra, India

PROFESSIONAL SUMMARY

Results-driven Software Engineer with **5+ years** of experience architecting enterprise solutions across **.NET and Angular** ecosystems. Proven track record delivering mission-critical, high-performance applications for global clients. Experienced **technical mentor**, **cross-functional collaborator**, and hands-on **full-stack engineer** with deep expertise in distributed systems, cloud infrastructure (**AWS, GCP**), and clean architecture patterns.

TECHNICAL SKILLS

Languages	C#, TypeScript, Python, SQL, Java, HTML/CSS
Frameworks	.NET (Web API, Blazor, EF Core), Angular (v7–v19), Flask, Node.js
Cloud & DevOps	AWS (SQS, SNS, S3, Lambda), Microsoft Azure (AZ-900 Certified), Google Cloud Platform, Cloudflare CDN, Docker, Linux
Architecture	Microservices, CQRS, Clean/Onion/Layered Architecture, Mediator Pattern, REST, WebSocket
Auth & Security	Firebase Auth, JWT, Role-Based Access Control (RBAC), MFA, Private Key Infrastructure
Databases	SQL Server, MongoDB, Entity Framework Core, Dapper
Tools	Git, Visual Studio, VS Code, JetBrains IDEs, Postman, Claude Code
Methodologies	Agile/Scrum, TDD, Code Review, Technical Mentorship

EXPERIENCE

Decos Software Development Pvt. Ltd.

Software Engineer

May 2025 – Present
Remote (Global Clients)

- Built full-stack features in **15+ business modules** (permits, enforcement, public notices, appeals, fees, groundwater, inspections) using **.NET 9 Blazor Server, EF Core** and **Oracle**.
- Upgraded a legacy admin app across **12 Angular major versions (8 → 20)** and a collaboration portal from **Angular 14 → 20**, including Material MDC and PrimeNG migrations and a move to `inject()`-based DI.
- Fixed **SQL injection** vulnerabilities by binding Oracle literals as parameters, validated dynamic table/column names against DB metadata, and disabled vulnerable query-builder endpoints.
- Removed an **O(N²) validation bottleneck** on a large form, fixed duplicate `EditContext` subscriptions and double renders, and added asset fingerprinting to stop stale browser caching.
- Designed a **dynamic validation framework** with configurable rule types and custom regex support, plus server-side translation of required-field messages.
- Implemented **geometry and polygon map search** across multiple modules, with configurable feature-info popups and result-size warnings.
- Built generic **filter-value and grouped-aggregation APIs** that power reusable chart components, dashboard saved-search widgets and **XLSX exports**.
- Migrated data access from **Dapper raw SQL to Entity Framework Core** with AutoMapper, and added an interceptor-based **soft delete and audit trail**.
- Delivered document and workflow features: **DMS sync**, HEIC/EML/Word previews with PDF conversion, bulk ZIP download, stop-workflow and next-inspection planning, and a **SignalR** real-time notification POC.
- Acting as **Claude Adoption Owner**: built a shared Claude Code plugin (skills, hooks, auto-onboarding) as a git submodule used by multiple repos, and added a **knowledge graph** of the codebase for AI-assisted development.

Tark Technologies LLP

Senior Software Engineer

April 2024 – April 2025

Rajkot, Gujarat

- Built a custom **template engine and markup language** for receipt printing, using a parser to let customers define layouts with variables, for-loops, if-else conditions, colors, font sizes, alignment, and spacing, rendered directly to the printer.
- Developed **SQL-based reports** delivering customer insights, and built a **custom scheduler** that lets customers automate report delivery and receive timely notifications on critical business metrics.
- Designed and built a **digital menu configuration interface** with reusable widgets (text, list, image) that lets customers create polished, customer-facing menus, with real-time out-of-stock indicators and backend services supporting the full system.
- Replaced **IdentityServer** with **Firebase authentication** across the web app, mobile app and API, using custom ASP.NET Core authentication handlers, **tenant-isolation** checks and Apple Sign-In.
- Delivered multi-location ordering and group ordering with referral codes, from the MongoDB data model and MediatR handlers through to the Angular user interface.
- **Mentored 7–10 junior developers** and interns across code review practices, architecture patterns, and test-driven development, directly improving team output quality.
- Organized and facilitated company-wide **hackathons** and tech **events with 50–100 attendees**, fostering collaboration between engineering teams and local university students.
- Architected and implemented a secure authentication system using Firebase and private key infrastructure with role-based access control (**RBAC**) and multi-factor authentication (**MFA**).
- Designed and developed a real-time messaging system with WebSocket integration for mobile field operations, including message queuing and offline message handling.

Tark Technologies LLP

Junior Software Engineer

July 2022 – April 2024

Rajkot, Gujarat

- Built **Apple Pay** and **Google Pay** checkout for a multi-tenant restaurant online-ordering platform (Angular 16 and .NET 8), including merchant validation and configuration per tenant.
- Built **POS-to-CCTV event** annotation and a carryout wait-time engine based on adjustable rules.
- Improved **reliability and performance**: faster Redis caching, health-check dashboards, structured Serilog logging, a fix for an open CORS policy, and ongoing Sonar clean-up.
- Engineered RESTful APIs across 2–3 .NET **microservices** for cross-platform applications, implementing caching strategies and request rate limiting for optimal performance.
- Led code refactoring initiative across .NET microservices, introducing **CQRS pattern** and implementing automated testing pipelines to improve code quality and deployment reliability.
- Designed distributed system architecture using **AWS services (SQS, SNS, S3) and Cloudflare CDN** for multi-location reliability, scalability, and data synchronization.
- Developed custom **HomeSeer automation** plugins integrating with POS systems, featuring automated device discovery and real-time hardware status monitoring.
- Implemented clean architecture patterns (layered, mediator, onion) with strong emphasis on dependency injection and interface segregation principles across the codebase.
- Developed full-stack airline reservation system (academic project) using .NET Web API and Angular, implementing a custom graph algorithm for optimal multi-city flight route calculation.
- Participated in technical planning sessions and sprint reviews, contributing to architectural decisions and feature prioritization.

Tark Technologies LLP

Software Engineer Intern

September 2021 – June 2022

Rajkot, Gujarat

- Developed an airline reservation project using .NET Web API and Angular. Implemented a graph search algorithm to efficiently find connecting flights in case of layovers, and incorporated common flight norms such as one-way, two-way and multicity options.

PROJECTS

Restaurant POS System | .NET Microservices, Angular, AWS, Cloudflare

- Architected and developed a comprehensive multi-location restaurant POS system using .NET microservices and Angular, featuring real-time order tracking and inventory management.
- Engineered a dynamic digital menu system with configurable business logic for stock management, item availability, and pricing rules across multiple restaurant locations.
- Designed distributed AWS architecture (SQS, SNS, S3) with Cloudflare CDN to support multi-location operations with reliable data synchronization.
- Built a custom receipt template interpreter using stack-based parsing for nested conditional and loop statements, enabling fully flexible receipt customization.
- Implemented a graph-based validation algorithm to prevent circular dependencies in restaurant menu screen mappings.
- Developed a robust form state management service with unsaved-change detection and navigation guards to prevent accidental data loss.

Printer Management Dashboard | .NET, Angular

- Built a real-time printer monitoring system integrated with the Windows print spooler, featuring job queue management, automated cleanup of stale jobs, and comprehensive error tracking.

Online Food Ordering Platform | Angular, Firebase, Google Pay, Apple Pay

- Developed a responsive online food ordering platform with real-time order tracking, dynamic menu management, and integrated kitchen notification system.
- Implemented secure authentication using Firebase SDK with custom claims and private key auth for internal microservice communication.
- Integrated Google Pay and Apple Pay payment gateways with comprehensive error handling and transaction management.

Audio Recording Module for POS | Python, Flask

- Built a Python-based audio recording system with custom buffer management, featuring automatic gain control, noise reduction, and efficient storage optimization.

Transformation Conversational Chat | Python, Flask, MongoDB, WebSocket

- Developed a real-time chat application with WebSocket integration, automatic language translation, message persistence, and user authentication.

RMC Chatbot | Python, RASA, AWS (S3, Lambda)

- Built a conversational AI chatbot using RASA with a custom NLP pipeline for intent classification and entity extraction.
- Deployed via serverless AWS architecture (S3 + Lambda) for scalable, low-maintenance hosting.

YouTube Transcript Summarizer | JavaScript, Python, Chrome Extension

- Created a Chrome Extension with a Python NLP backend for automated text summarization of YouTube video transcripts.

CERTIFICATIONS

Microsoft Certified: Azure Fundamentals (AZ-900)

Microsoft

2026

Verify: ECB83E85AFC2E6F3

EDUCATION

V.V.P. Engineering College

Bachelor of Engineering in Computer Engineering (CGPA: 9.26 / 10)

Sep 2018 – May 2022

Rajkot, Gujarat
